

Electric Utility Liaison Training Course

Electric outages can be complex, political, and costly. During a disaster, utility companies must work hand-in-hand with Emergency Management for mutual success. This coordination often requires representation at the local, county, or state Emergency Operations Center (EOC).

This 6-hour course will train your representatives how to:

- Work within the National Incident Management System (NIMS) and the Incident Command System (ICS)
- Integrate the utility's operational needs and expectations when working in a local, county, or state EOC
- Participate directly in coordinated operational planning and facilitating effective communication between the EOC and the utility

The training is dynamic and interactive, facilitated by experienced emergency management and utility professionals.

**Electrical
Utilities are
Central to our
Nation's
Critical
Infrastructure**
